

# Contact Management System

## Project Summary

This project is a simple Contact Management System developed using HTML, CSS (Bootstrap), and JavaScript. It allows users to add, view, edit, and delete contact details. The data is temporarily stored in an array during the session (no backend integration).

## Key Features:

- Add new contact with name, phone number, and email.
- Edit contact details via modal form.
- Delete contact entries.
- UI built using Bootstrap 5 for responsiveness and styling.

## Technologies Used:

- HTML
- CSS (Bootstrap)
- JavaScript
